

CHAPTER 1 – THE MERIDIAN ARCHIVE

Bellweather Station stood on a low hill above Northpoint Harbor. For decades, the building had served as a railway office, weather station, and eventually a historical archive. Its basement contained thousands of records from the old Meridian Railway.

Mara Venn, the chief archivist, discovered an unusual timetable dated 2 February 1990. It listed Service 47 leaving Northpoint at 11:10 PM and reaching Eastwatch at 12:05 AM. According to official records, however, the Meridian passenger railway had closed in 1987.

Mara asked Dr. Leena Rao, a historian, to investigate. Leena compared the timetable with engineering drawings, harbor ledgers, signal logs, aerial photographs, and private letters. Each source revealed another part of the story.

The Meridian Railway had been completed in 1896 and measured 86.4 kilometers. It included seven stations, three tunnels, eleven bridges, and the difficult 4.8-kilometer section known as Raven's Pass. A service tunnel ran beside part of the line.

Jonas Reed, an engineer, discovered an abandoned telegraph cable beneath Bellweather Station. Iris Vale, a cartographer, found an old map showing Gate House 3 near South Pier. Samuel Pike, the harbor master, remembered stories about emergency cargo being moved by rail during severe storms in 1990.

The investigation eventually showed that the railway had been temporarily reopened for emergency freight. Fourteen trains moved medical supplies, food, water, fuel, blankets, and equipment to isolated communities. Service 47 carried medical supplies. Service 49 was the final documented movement and became stranded after a landslide.

The evidence was scattered across many collections. A Northpoint ledger recorded 4,800 liters of diesel. An Eastwatch signal log recorded train movements. A family letter from Daniel Vale confirmed that fuel had been supplied at cost. A report by Elias Mercer explained why officials had kept the operation quiet.

The researchers also found an unstable bridge at kilometer 84 and an unexplained diagram labeled Line C. The bridge was left closed, while Line C was marked as unverified.

Chapter 1 reinforces the central lesson of the project: historical truth can survive in fragments. A timetable, a map, a number, or a handwritten note may seem insignificant alone, but connected records can reconstruct an entire event.

For the archive team, the work was not simply about discovering an old railway. It was about understanding how ordinary people responded when roads failed and isolated communities needed help. The records showed that the emergency railway was operated by volunteers who worked long hours, transported essential supplies, and accepted considerable risk.

Mara created permanent identifiers for the important evidence. BWS-MER-001 referred to the 1990 timetable, BWS-MER-002 to drawing M-22, BWS-MER-003 to the Gate House 3 photograph, BWS-MER-004 to the Northpoint cargo ledger, BWS-MER-005 to Elias Mercer's report, BWS-MER-006 to the Eastwatch signal log, BWS-MER-007 to Daniel Vale's letter, BWS-MER-008 to the bridge inspection, BWS-MER-009 to the volunteer notebook, BWS-MER-010 to the Service 49 report, and BWS-MER-011 to the mysterious Line C diagram.

The archive eventually became a public research collection. Visitors could search by date, person, train number, location, cargo, or document

identifier. Researchers could follow relationships between documents and determine whether a claim was strongly confirmed, moderately supported, or still uncertain.

The story of the Meridian Railway therefore became a useful example of distributed memory. Bellweather preserved railway records. Northpoint preserved shipping records. The Lantern Map Room preserved maps. Families preserved letters. Retired workers preserved memories. No single source contained the whole story.

The work continued, because every newly discovered document had the potential to answer one question and create another.

CHAPTER 2 – THE MERIDIAN ARCHIVE

Bellweather Station stood on a low hill above Northpoint Harbor. For decades, the building had served as a railway office, weather station, and eventually a historical archive. Its basement contained thousands of records from the old Meridian Railway.

Mara Venn, the chief archivist, discovered an unusual timetable dated 2 February 1990. It listed Service 47 leaving Northpoint at 11:10 PM and reaching Eastwatch at 12:05 AM. According to official records, however, the Meridian passenger railway had closed in 1987.

Mara asked Dr. Leena Rao, a historian, to investigate. Leena compared the timetable with engineering drawings, harbor ledgers, signal logs, aerial photographs, and private letters. Each source revealed another part of the story.

The Meridian Railway had been completed in 1896 and measured 86.4 kilometers. It included seven stations, three tunnels, eleven bridges, and the difficult 4.8-kilometer section known as Raven's Pass. A service tunnel ran beside part of the line.

Jonas Reed, an engineer, discovered an abandoned telegraph cable beneath Bellweather Station. Iris Vale, a cartographer, found an old map showing Gate House 3 near South Pier. Samuel Pike, the harbor master, remembered stories about emergency cargo being moved by rail during severe storms in 1990.

The investigation eventually showed that the railway had been temporarily reopened for emergency freight. Fourteen trains moved medical supplies, food, water, fuel, blankets, and equipment to isolated communities. Service 47 carried medical supplies. Service 49 was the final documented movement and became stranded after a landslide.

The work continued, because every newly discovered document had the potential to answer one question and create another.

CHAPTER 10 – THE MERIDIAN ARCHIVE

Bellweather Station stood on a low hill above Northpoint Harbor. For decades, the building had served as a railway office, weather station, and eventually a historical archive. Its basement contained thousands of records from the old Meridian Railway.

Mara Venn, the chief archivist, discovered an unusual timetable dated 2 February 1990. It listed Service 47 leaving Northpoint at 11:10 PM and reaching Eastwatch at 12:05 AM. According to official records, however, the Meridian passenger railway had closed in 1987.

Mara asked Dr. Leena Rao, a historian, to investigate. Leena compared the timetable with engineering drawings, harbor ledgers, signal logs, aerial photographs, and private letters. Each source revealed another part of the story.

The Meridian Railway had been completed in 1896 and measured 86.4 kilometers. It included seven stations, three tunnels, eleven bridges, and the difficult 4.8-kilometer section known as Raven's Pass. A service tunnel ran beside part of the line.

Jonas Reed, an engineer, discovered an abandoned telegraph cable beneath Bellweather Station. Iris Vale, a cartographer, found an old map showing Gate House 3 near South Pier. Samuel Pike, the harbor master, remembered stories about emergency cargo being moved by rail during severe storms in 1990.

The investigation eventually showed that the railway had been temporarily reopened for emergency freight. Fourteen trains moved medical supplies, food, water, fuel, blankets, and equipment to isolated communities. Service 47 carried medical supplies. Service 49 was the final documented movement and became stranded after a landslide.

The evidence was scattered across many collections. A Northpoint ledger recorded 4,800 liters of diesel. An Eastwatch signal log recorded train movements. A family letter from Daniel Vale confirmed that fuel had been supplied at cost. A report by Elias Mercer explained why officials had kept the operation quiet.

The researchers also found an unstable bridge at kilometer 84 and an unexplained diagram labeled Line C. The bridge was left closed, while Line C was marked as unverified.

Chapter 10 reinforces the central lesson of the project: historical truth can survive in fragments. A timetable, a map, a number, or a handwritten note may seem insignificant alone, but connected records can reconstruct an entire event.

For the archive team, the work was not simply about discovering an old railway. It was about understanding how ordinary people responded when roads failed and isolated communities needed help. The records showed that the emergency railway was operated by volunteers who worked long hours, transported essential supplies, and accepted considerable risk.

Mara created permanent identifiers for the important evidence. BWS-MER-001 referred to the 1990 timetable, BWS-MER-002 to drawing M-22, BWS-MER-003 to the Gate House 3 photograph, BWS-MER-004 to the Northpoint cargo ledger, BWS-MER-005 to Elias Mercer's report, BWS-MER-006 to the Eastwatch signal log, BWS-MER-007 to Daniel Vale's letter, BWS-MER-008 to the bridge inspection, BWS-MER-009 to the volunteer notebook, BWS-MER-010 to the Service 49 report, and BWS-MER-011 to the mysterious Line C diagram.

The archive eventually became a public research collection. Visitors could search by date, person, train number, location, cargo, or document

identifier. Researchers could follow relationships between documents and determine whether a claim was strongly confirmed, moderately supported, or still uncertain.

The story of the Meridian Railway therefore became a useful example of distributed memory. Bellweather preserved railway records. Northpoint preserved shipping records. The Lantern Map Room preserved maps. Families preserved letters. Retired workers preserved memories. No single source contained the whole story.

The work continued, because every newly discovered document had the potential to answer one question and create another.

CHAPTER 11 – THE MERIDIAN ARCHIVE

Bellweather Station stood on a low hill above Northpoint Harbor. For decades, the building had served as a railway office, weather station, and eventually a historical archive. Its basement contained thousands of records from the old Meridian Railway.

Mara Venn, the chief archivist, discovered an unusual timetable dated 2 February 1990. It listed Service 47 leaving Northpoint at 11:10 PM and reaching Eastwatch at 12:05 AM. According to official records, however, the Meridian passenger railway had closed in 1987.

Mara asked Dr. Leena Rao, a historian, to investigate. Leena compared the timetable with engineering drawings, harbor ledgers, signal logs, aerial photographs, and private letters. Each source revealed another part of the story.

The Meridian Railway had been completed in 1896 and measured 86.4 kilometers. It included seven stations, three tunnels, eleven bridges, and the difficult 4.8-kilometer section known as Raven's Pass. A service tunnel ran beside part of the line.

CHAPTER 19 – THE MERIDIAN ARCHIVE

Bellweather Station stood on a low hill above Northpoint Harbor. For decades, the building had served as a railway office, weather station, and eventually a historical archive. Its basement contained thousands of records from the old Meridian Railway.

Mara Venn, the chief archivist, discovered an unusual timetable dated 2 February 1990. It listed Service 47 leaving Northpoint at 11:10 PM and reaching Eastwatch at 12:05 AM. According to official records, however, the Meridian passenger railway had closed in 1987.

Mara asked Dr. Leena Rao, a historian, to investigate. Leena compared the timetable with engineering drawings, harbor ledgers, signal logs, aerial photographs, and private letters. Each source revealed another part of the story.

The Meridian Railway had been completed in 1896 and measured 86.4 kilometers. It included seven stations, three tunnels, eleven bridges, and the difficult 4.8-kilometer section known as Raven's Pass. A service tunnel ran beside part of the line.

Jonas Reed, an engineer, discovered an abandoned telegraph cable beneath Bellweather Station. Iris Vale, a cartographer, found an old map showing Gate House 3 near South Pier. Samuel Pike, the harbor master, remembered stories about emergency cargo being moved by rail during severe storms in 1990.

The investigation eventually showed that the railway had been temporarily reopened for emergency freight. Fourteen trains moved medical supplies, food, water, fuel, blankets, and equipment to isolated communities. Service 47 carried medical supplies. Service 49 was the final documented movement and became stranded after a landslide.

The evidence was scattered across many collections. A Northpoint ledger recorded 4,800 liters of diesel. An Eastwatch signal log recorded train movements. A family letter from Daniel Vale confirmed that fuel had been supplied at cost. A report by Elias Mercer explained why officials had kept the operation quiet.

The researchers also found an unstable bridge at kilometer 84 and an unexplained diagram labeled Line C. The bridge was left closed, while Line C was marked as unverified.

Chapter 19 reinforces the central lesson of the project: historical truth can survive in fragments. A timetable, a map, a number, or a handwritten note may seem insignificant alone, but connected records can reconstruct an entire event.

For the archive team, the work was not simply about discovering an old railway. It was about understanding how ordinary people responded when roads failed and isolated communities needed help. The records showed that the emergency railway was operated by volunteers who worked long hours, transported essential supplies, and accepted considerable risk.

Mara created permanent identifiers for the important evidence. BWS-MER-001 referred to the 1990 timetable, BWS-MER-002 to drawing M-22, BWS-MER-003 to the Gate House 3 photograph, BWS-MER-004 to the Northpoint cargo ledger, BWS-MER-005 to Elias Mercer's report, BWS-MER-006 to the Eastwatch signal log, BWS-MER-007 to Daniel Vale's letter, BWS-MER-008 to the bridge inspection, BWS-MER-009 to the volunteer notebook, BWS-MER-010 to the Service 49 report, and BWS-MER-011 to the mysterious Line C diagram.

The archive eventually became a public research collection. Visitors could search by date, person, train number, location, cargo, or document

identifier. Researchers could follow relationships between documents and determine whether a claim was strongly confirmed, moderately supported, or still uncertain.

The story of the Meridian Railway therefore became a useful example of distributed memory. Bellweather preserved railway records. Northpoint preserved shipping records. The Lantern Map Room preserved maps. Families preserved letters. Retired workers preserved memories. No single source contained the whole story.

The work continued, because every newly discovered document had the potential to answer one question and create another.

CHAPTER 20 – THE MERIDIAN ARCHIVE

Bellweather Station stood on a low hill above Northpoint Harbor. For decades, the building had served as a railway office, weather station, and eventually a historical archive. Its basement contained thousands of records from the old Meridian Railway.

Mara Venn, the chief archivist, discovered an unusual timetable dated 2 February 1990. It listed Service 47 leaving Northpoint at 11:10 PM and reaching Eastwatch at 12:05 AM. According to official records, however, the Meridian passenger railway had closed in 1987.

Mara asked Dr. Leena Rao, a historian, to investigate. Leena compared the timetable with engineering drawings, harbor ledgers, signal logs, aerial photographs, and private letters. Each source revealed another part of the story.

The Meridian Railway had been completed in 1896 and measured 86.4 kilometers. It included seven stations, three tunnels, eleven bridges, and the difficult 4.8-kilometer section known as Raven's Pass. A service tunnel ran beside part of the line.

Jonas Reed, an engineer, discovered an abandoned telegraph cable beneath Bellweather Station. Iris Vale, a cartographer, found an old map showing Gate House 3 near South Pier. Samuel Pike, the harbor master, remembered stories about emergency cargo being moved by rail during severe storms in 1990.

The investigation eventually showed that the railway had been temporarily reopened for emergency freight. KEY FACTS FOR RETRIEVAL TESTING

People:

Mara Venn – chief archivist at Bellweather Station.

Jonas Reed – field engineer who investigated the old electrical and telegraph systems.

Dr. Leena Rao – historian studying the Meridian Railway.

Samuel Pike – harbor master of Northpoint Harbor.

Iris Vale – cartographer who operates the Lantern Map Room.

Tomas Bell – mechanic familiar with old coastal vehicles.

Elias Mercer – coordinator of the 1990 emergency railway.

Daniel Vale – industrial supplier who provided emergency fuel.

Places:

Bellweather Station – former railway communications office and present-day archive.

Northpoint Harbor – coastal logistics center.

Eastwatch Hill – location of the old signal tower.

Raven's Pass – 4.8-kilometer difficult railway section.

Greywater Marsh – location of the northern emergency depot.

South Pier – area near Gate House 3.

Lantern Map Room – Iris Vale's cartography business.

Depot Two – emergency storage depot beyond Raven's Pass.

Kilometer 84 Bridge – unstable 92-meter steel bridge.

Cedar Market – commercial district near the map room.

Dates:

1888 – Meridian Railway construction began.

1894 - Bellweather basement was constructed.
1896 - Meridian Railway was completed.
14 October 1987 - official passenger service ended.
27 January 1990 - severe storm period began.
2 February 1990 - Service 47 was documented.
3 February 1990 - 4,800-liter fuel invoice was recorded.
9 February 1990 - Service 49 became the final documented emergency movement.
1991 - aerial photography showed the northern track had disappeared.
14 October - digital archive launched.

Numbers:

86.4 kilometers - length of Meridian Railway.
4.8 kilometers - length of Raven's Pass.
1.3 kilometers - disputed extension of the service tunnel.
7.2 kilometers - approximate road distance between Northpoint and Eastwatch.
4.9 kilometers - approximate tunnel distance between Northpoint and Eastwatch.
92 meters - approximate length of the kilometer 84 bridge.
8 centimeters - approximate displacement measured at the eastern bridge support.
4,800 liters - major fuel shipment.
5,000 liters - maximum recorded Depot Two fuel capacity.
14 - documented emergency trains.
600 - blankets in one emergency shipment.
240 - water containers in one shipment.
320 - emergency lanterns recorded.
2,400 kilograms - medical supplies recorded in the reconstructed totals.
8,100 kilograms - food recorded in the reconstructed totals.
12,000 liters - drinking water recorded in the reconstructed totals.

Train information:

Service 42 - food.
Service 44 - maintenance equipment.
Service 47 - medical supplies.
Service 49 - fuel and mixed emergency cargo.

Documents:

BWS-1990-021 - mysterious 1990 timetable.
BWS-MER-001 - timetable.
BWS-MER-002 - engineering drawing M-22.
BWS-MER-003 - Gate House 3 photograph.
BWS-MER-004 - Northpoint cargo ledger.
BWS-MER-005 - Elias Mercer's report.
BWS-MER-006 - Eastwatch signal log.
BWS-MER-007 - Daniel Vale's letter.
BWS-MER-008 - bridge inspection.
BWS-MER-009 - volunteer notebook.
BWS-MER-010 - Service 49 report.
BWS-MER-011 - Line C diagram.
BWS-TECH-014 - abandoned telegraph cable.

FREQUENT QUESTIONS

Why was the Meridian Railway reopened?

It was temporarily reopened to transport emergency supplies after severe storms blocked roads and isolated communities.

What did Service 47 carry?

Medical supplies.

What did Service 49 carry?

Fuel and mixed emergency cargo. It became stranded after a landslide blocked the northern route.

Where was Gate House 3?

Near the old drainage channel north of South Pier.

How long was the Meridian Railway?

86.4 kilometers.

How long was Raven's Pass?

4.8 kilometers.

How much diesel was recorded in the major fuel shipment?

4,800 liters.

Was the kilometer 84 bridge safe?

No. Historical and later inspection evidence indicated that it was unstable.

What is Line C?

An undocumented route shown on one surviving diagram, apparently extending about 11 kilometers north of Eastwatch. Its existence remains unverified.

Why was the emergency railway kept quiet?

Officials considered the abandoned railway unsafe for public passenger use and did not want people attempting to travel on it.

How long did the emergency operation last?

Approximately six weeks.

How many emergency trains were documented?

Fourteen.

What was the central finding of the archive project?

The history survived across many independent collections rather than in one complete record.

RESEARCH NOTES

The 1990 timetable is one of the strongest pieces of evidence because it gives both a train number and precise times. Service 47 is associated with 11:10 PM departure and 12:05 AM arrival.

The Gate House marker uses the sequence 47 / 110 / 605. Researchers believe this connects directly to Service 47, its departure time, and its arrival time.

Drawing M-22 is more informative than drawing M-17 because it shows the service tunnel continuing approximately 1.3 kilometers farther toward the coast.

The Northpoint ledger records 4,800 liters of diesel, while Depot Two has a maximum recorded capacity of 5,000 liters. The two values are therefore consistent.

The bridge at kilometer 84 should not be crossed. It is approximately 92 meters long and the eastern support has shifted about 8 centimeters from historical alignment.

Line C is not confirmed. It appears only on BWS-MER-011 and should be described as a possible route rather than an established railway.

The old telegraph cable under Bellweather Station is not an active power line. It belongs to the earlier railway communications system and should not be connected to modern electrical equipment.

The emergency railway carried freight rather than passengers. This distinction is important when interpreting the 1990 records.

The project demonstrates the value of cross-document retrieval. A question about Service 47 can be answered using the timetable, signal log, telegraph message, and medical cargo records. A question about the 4,800-liter fuel shipment can be answered using the harbor ledger, invoice, and Depot Two inventory.

The archive uses confidence levels. High-confidence claims appear in multiple independent sources. Medium-confidence claims have supporting evidence but lack complete documentation. Low-confidence claims depend on a single uncertain artifact.

The researchers deliberately preserved unresolved questions. Not every mystery should be converted into a fact. Line C remains an example of responsible uncertainty.

SUPPLEMENTAL RECORD 001

Record 001 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 001 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 002

Record 002 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 002 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 003

Record 003 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 003 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 004

Record 004 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 004 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 005

Record 005 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 005 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 006

Record 006 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 006 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 007

Record 007 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 007 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 008

Record 008 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 008 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 009

Record 009 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 009 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 010

Record 010 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 010 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 011

Record 011 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 011 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 012

Record 012 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 012 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 013

Record 013 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 013 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 014

Record 014 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 014 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 015

Record 015 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 015 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 016

Record 016 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 016 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 017

Record 017 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 017 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 018

Record 018 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 018 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 019

Record 019 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 019 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 020

Record 020 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 020 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 021

Record 021 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 021 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 022

Record 022 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 022 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 023

Record 023 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 023 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 024

Record 024 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 024 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 025

Record 025 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 025 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 026

Record 026 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 026 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 027

Record 027 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 027 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 028

Record 028 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 028 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 029

Record 029 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 029 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 030

Record 030 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 030 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 031

Record 031 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 031 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 032

Record 032 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 032 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 033

Record 033 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 033 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 034

Record 034 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 034 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 035

Record 035 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 035 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 036

Record 036 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 036 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 037

Record 037 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 037 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 038

Record 038 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 038 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 039

Record 039 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 039 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 040

Record 040 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 040 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 041

Record 041 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 041 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 042

Record 042 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 042 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 043

Record 043 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 043 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 044

Record 044 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 044 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 045

Record 045 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 045 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 046

Record 046 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 046 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 047

Record 047 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 047 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 048

Record 048 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 048 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 049

Record 049 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 049 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 050

Record 050 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 050 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 051

Record 051 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 051 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 052

Record 052 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 052 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 053

Record 053 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 053 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 054

Record 054 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 054 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 055

Record 055 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 055 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 056

Record 056 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 056 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 057

Record 057 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 057 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 058

Record 058 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 058 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 059

Record 059 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 059 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 060

Record 060 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 060 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 061

Record 061 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 061 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 062

Record 062 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 062 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 063

Record 063 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 063 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 064

Record 064 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 064 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 065

Record 065 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 065 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 066

Record 066 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 066 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 067

Record 067 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 067 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 068

Record 068 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 068 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 069

Record 069 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 069 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 070

Record 070 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 070 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 071

Record 071 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 071 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 072

Record 072 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 072 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 073

Record 073 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 073 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 074

Record 074 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 074 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 075

Record 075 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 075 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 076

Record 076 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 076 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 077

Record 077 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 077 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 078

Record 078 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 078 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 079

Record 079 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 079 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 080

Record 080 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 080 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 081

Record 081 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 081 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 082

Record 082 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 082 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 083

Record 083 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 083 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 084

Record 084 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 084 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 085

Record 085 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 085 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 086

Record 086 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 086 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 087

Record 087 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 087 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 088

Record 088 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 088 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 089

Record 089 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 089 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 090

Record 090 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 090 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 091

Record 091 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 091 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 092

Record 092 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 092 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 093

Record 093 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 093 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 094

Record 094 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 094 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 095

Record 095 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 095 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 096

Record 096 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 096 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 097

Record 097 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 097 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 098

Record 098 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was

approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.

The most frequently referenced emergency train was Service 47, which carried medical supplies. Its timetable recorded departure at 11:10 PM and arrival at 12:05 AM. Service 49 was the final documented movement and was affected by a landslide.

The most important fuel quantity was 4,800 liters. Depot Two could hold approximately 5,000 liters. The emergency operation documented fourteen trains and transported food, medical supplies, fuel, water, blankets, and lanterns.

Record 098 is intended to provide additional searchable context for retrieval experiments. It is not an independent historical source and should not override the primary documents identified by BWS-MER document numbers.

SUPPLEMENTAL RECORD 099

Record 099 belongs to the Meridian Archive research collection. This record concerns the reconstruction of the 1990 emergency railway and should be interpreted alongside the main narrative and appendices.

The principal archive location is Bellweather Station. Related locations include Northpoint Harbor, Eastwatch Hill, Raven's Pass, Greywater Marsh, South Pier, and the Lantern Map Room. Principal researchers include Mara Venn, Jonas Reed, Dr. Leena Rao, Samuel Pike, Iris Vale, and Tomas Bell.

The railway's total length was 86.4 kilometers. Raven's Pass measured 4.8 kilometers. The road distance between Northpoint and Eastwatch was approximately 7.2 kilometers, while the tunnel route was approximately 4.9 kilometers. The kilometer 84 bridge was approximately 92 meters long and was considered unsafe.
